## PERSONAL PROJECTS

### Courier Management System (Website) (06/2023)

- ▣ The Courier Management System project aimed to streamline and optimize the process of managing courier services within a company. I undertook this project to demonstrate my proficiency in software development and database management.
- ▣ Technologies Used: HTML, CSS, JavaScript, PHP, MySQL .

### National Parks (Website)

- ▣ National parks is a website which provides the people who are interested in visiting national parks and interested in wild animals can view this website to where they can get to know where the national park is situated and what all animals residing in that national park.

### Online College Management (Website)

- ▣ Online College Management System is a project developed using Asp Dot Net MVC.
- ▣ As of today world all the manual paper work like accounting, maintaining records are computerized. Even the college and school admission, result declaration is performed online today. Due to which all the school and colleges felt the need of making the website of their organization.
